Potting Instructions

- Place your soil & nutrients into your pot, packed gently down
- To arrange succulents start with your “thrillers” biggest/tallest at the center or the back of pot (personal preference). Then your “fillers” usually these will look more like flowers or medium/small in size. Finish with your “spillers” these will look like strands that you’ll pot at the edge to hang down from your pot
- Once you’ve decided your arrangements with dowel or your finger create hole in soil big enough for your stem & roots to fit your plant in & gently pack soil down around stem of plant. Do this process one by one to each plant
- Wait 2-3 days for initial watering to allow your succulents to acclimate
- Water your soil thoroughly and do not water again till soil is bone dry all the way through
- Place your arrangement in bright, indirect lighting

Happy Creating!
