Succulent Creation Care

To care for your succulent, provide bright, indirect light. Mist your creation with water once a week to once every week and half. Once holiday season is over or succulents are not looking as fresh, carefully remove the succulents by gently pulling off of moss. You can plant them in a pot with succulent soil with good drainage or in your garden to give them a new home and continue to grow!

For potting instructions go to “Potting Instructions”

Happy Creating!
